

# More than a dental implant – brand matters

Independent landmark study shows significantly lower failure rate with Straumann dental implants.

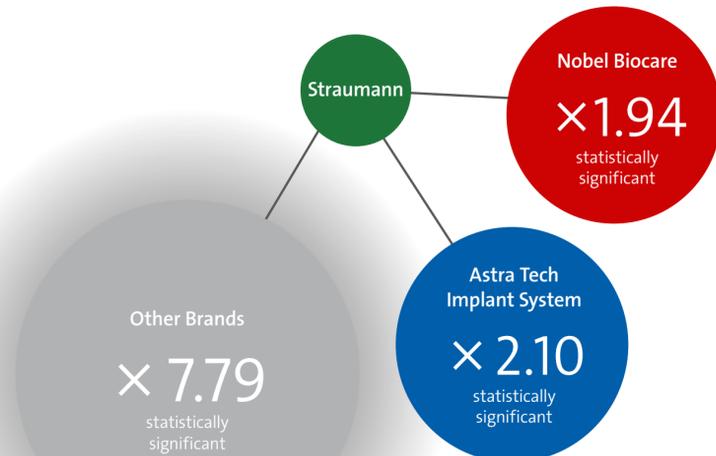

## Study design

## Results

Risk of implant loss compared to Straumann dental implants, expressed as “odds ratio” (OR)

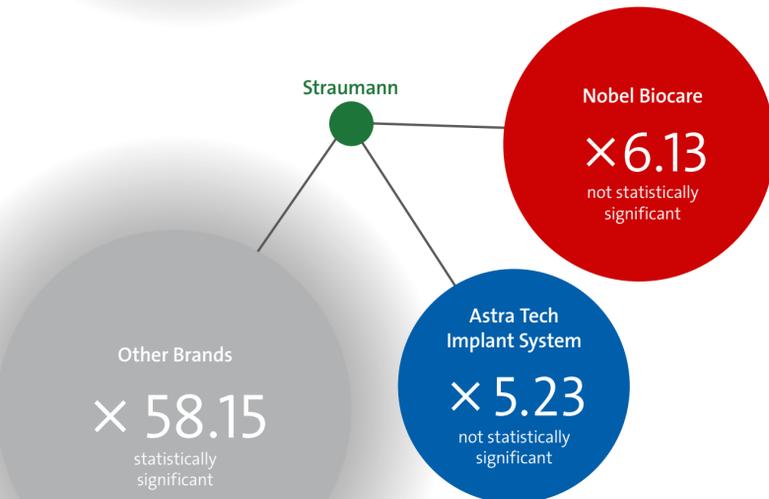

Early implant loss

overall

154 implants lost (1.4%);  
121 patients affected (4.4%).

Late implant loss

46 implants lost (2.0%);  
25 patients affected (4.2%).

If implant loss had occurred prior to connection of the supraconstruction, it was scored as an early implant loss. If the loss had occurred afterward, it was considered a late implant loss.

## Conclusion

These findings are extremely relevant for dentists and patients who want to choose an implant system on the basis of independent published clinical evidence. They add to the unparalleled body of long-term clinical data supporting Straumann’s dental implant system. Impressive long-term outcomes have been reported with Straumann implants in other peer-reviewed publications, including 10-year survival rates of 97 – 99 % in more than 600 patients<sup>1</sup>.

## Brand matters!

Because one implant failure is one too much.
